

Quick Guide – How to repair your HEX Filter panel

The HEX Filter Panel Plug offers a fast and economical way to repair damaged filter panels. For the original BeeCell Filter Panel with 26 mm-wide cells, the 30 mm plug (Part No. K-00151) is required. For the new HP Filter Panel with 36 mm-wide cells, the 40 mm plug (Part No. E-08053) is the correct choice.

The Filter panel plug is a soft, round rubber piece that fits into the hexagonal cell of the HEX Filter panel.

It is not necessary to remove the filter panels from the drum. Locate the damaged filter cell and carefully cut it open.

Mount the plug so that it sticks out of the cell on both ends, allowing it to lock into position.
